What makes a review worthy of trust?

Think of a moment when a review built or weakened trust

1 minute alone

What happened? What mattered?

2 minutes each

Listen for your partner's perspective.

One quality to protect

What should your process make possible?

What would an applicant need to experience?

[Trust conversation](#)

[Practice workbook \(PDF\)](#)

How will we learn from each other?

A conversation we can carry into our work

Think quietly

Form your own reading.

Share perspectives

Hear another reason.

Examine the difference

Ask what led them there.

Revise the practice

Keep or change your judgment.

Growth matters when it changes what we do.

Conversation companion

What could a polished summary hide?

Can I stretch your thinking a little?

A prepared draft

A clear answer can still miss evidence.

The source packet

What does the draft ask us to assume?

What would you check before someone relied on it?

Prepared draft and source

One application, different readings

C-101 is our fictional case throughout the session

A goal

A water systems certificate and a next step.

A contribution

A repair table and a change to its queue.

An open question

The enrollment document is missing.

AI-generated image · fictional people

Read P1–P5 on your own before comparing interpretations.

Shared case and rubric

What do you see that I might miss?

Does the change in P3 meet our reflection or adaptation criterion?

3 minutes alone

Choose a rating. Underline the evidence.

2 minutes each

Explain the reason. Listen for a difference.

3 minutes together

Clarify one scoring description.

Which detail led you there?

Shared case and rubric

What are you reconsidering?

A little silence before we move on

2 quiet minutes

What assumption changed?
What question remains?

Share only what you choose.

My reflection

Where does our process need a person?

One task, named people, a reason to pause

Before the tool

Approve the service and permitted input.

Before relying on it

Check each claim against the source.

Before a decision

Name the person who decides and corrects.

We will pause if ...

Workflow conversation

Workflow reference (PDF)

What might another team question?

A useful challenge can change our strategy

2 minutes per group

Explain your route. Invite one question.

2 minutes to revise

Which assumption needs another look?

AI-generated image · fictional people

What changed because someone challenged your thinking?

Workflow conversation

What would a fair response sound like?

C-101 reports translation help after a detector flag

Our published practice rule

Translation help is permitted. Facts must be accurate.

Our question

What concern, if any, do these facts justify?

A detector flag alone does not establish misconduct.

[Fair-response conversation](#)

[Fair response reference \(PDF\)](#)

How might it feel to receive our question?

Draft, listen from the applicant's perspective, then revise

3 minutes to draft

Explain the actual question clearly.

3 minutes to listen

What feels assumed? How could I respond?

2 minutes to revise

Offer an accessible response route.

AI-generated image · fictional people

No policy concern? Follow up on the missing document.

Fair-response conversation

What will you try, and who will help you learn?

One change to your review practice in the next 30 days

One action

What quality of trust will it protect?

One learning partner

Who will question and reflect with you?

Evidence and a date

What would show improvement or a need to pause?

Your plan and the full resource library: mguhlin.github.io/nspa/2026/

My one-change plan

Workshop materials

A request we can check

Optional reference A. Use when a question calls for it.

Task

What should it do?

Criteria

Which published rules?

Evidence

Which supplied sources?

Limits

Which decisions stay human?

Output

How can we check it?

Keep gaps visible. Require source paragraphs.

Prompt practice lab

A scoring description we can discuss

Optional reference B. Reflection or adaptation in P3.

0

No learning or adaptation stated.

1

A learning claim without an example.

2

A specific change connected to an experience.

Compare human reasons before viewing an AI rating.

Scoring practice lab

Demo 2: worked example

Approval before real applicant information

Optional reference C. Local owners approve the actual use.

The service and settings

Access, storage, retention, deletion, and training use.

The minimum information

Removing a name can leave identifying details.

The people responsible

Approval, incident response, and correction.

AI-generated image · fictional people

Practice with fictional data until the real use is approved.

[Workflow reference \(PDF\)](#)

A detector result needs context

Optional reference D. A signal cannot settle a policy question.

What the indicator describes

Flagged qualifying prose, not a misconduct probability.

What the studies establish

Findings depend on the language, sample, and detector.

What people must decide

The published rule, evidence, and a fair response.

Never deny an award using a detector score alone.

[Fair response reference \(PDF\)](#)

[Sources & context](#)

Resources for the question that comes next

Optional reference E. Choose what helps your practice.

Your conversation notes

The workbook and guided companion.

A reference when needed

Prompts, privacy, fairness, and readiness.

The full library

All infographics, guides, and earlier sessions.
