Your scholarship review workbook

90-minute session · 24 core slides and four backups. All practice records and displayed responses are fictional authored teaching examples, not captured model outputs.

AI can sort, summarize, and suggest. People decide.

Use this workbook alongside the presentation and session companion. Keep applicant information out of your notes. Share only what you choose.

1. Trust and a clear review request

Slides 1–8. What should applicants and reviewers be able to explain? Write a prompt with role, task, context, verbatim criteria, output format and constraints.

The quality of trust our process should protect

My task, criteria, evidence requirements and boundaries

2. Administrative triage

Slide 10 · Requirements: essay, reference, transcript; GPA at least 3.0; Texas residency. These are fictional practice rules.

A-101 · P1: All three documents supplied. GPA 3.4. States Texas residency.

A-102 · P1: Essay and transcript supplied. Reference absent. GPA 3.1. States Texas residency.

A-103 · P1: Essay and reference supplied. Transcript absent. GPA 3.5. No residency statement.

For each record, identify the source and a possible gap. Report eligibility evidence separately as met, not met or unknown. A flag requires a human check, not automatic rejection.

ID, requirement, source, draft status and staff question

Who checks the result and follows up?

3. Evidence before a draft score

Slides 7 and 11 · Rate independently before considering the prepared draft.

4 · Exemplary: Sustained contribution, a clear role and evidence of results.

3 · Proficient: Specific contribution and role; results are partly documented.

2 · Developing: A contribution is described; the role or results remain unclear.

1 · Beginning: A general service claim with little supporting detail.

Fictional essay · P1

For six Saturdays I helped at a neighborhood repair table. When our sign-in line got long, I suggested separate lines for tool returns and new requests. The volunteer lead tried the change the next week.

The prepared draft proposes 3 of 4. A change was tried; improved results were not established. This illustrative rubric is not a validated selection instrument. A different adopted rubric may lead to another rating.

My rating, exact quote and uncertainty

My partner’s reason and any clarification to the rubric

4. Organizing and checking a workflow

Slides 12–14 · These short examples are separate from the triage and essay exercises.

A-101 · P1: “I care for my younger brother after school.” Possible tag: caregiving.

A-102 · P1: “I plan to complete a nursing certificate.” Possible tag: healthcare goal.

A-103 · P1: “Neither parent attended college.” Possible tag: first-generation context. Confirm the program definition.

Tags describe supplied text; they do not establish eligibility. Do not infer sensitive traits or rank applicants. A person checks every consequential summary.

A neutral summary or tag, its source, and what remains unknown

Who approves the input, checks the evidence, decides and audits?

My test and pause condition

Try repeat runs, a controlled fictional name change, and comparison with independent human judgment. Ten cases can reveal a problem; they cannot certify fairness.

5. Applicant AI use and transparency

Slides 15–21 · A finalist’s essay feels “too perfect.” A reviewer suspects AI use without other evidence.

Discuss what the published rule and available evidence support. Polished style and detector output alone do not establish misconduct. Use a fair, consistent process and an accessible response route.

Policy choices

Prohibit: define scope and accessibility exceptions. Disclose: explain how a short statement affects review. Bounded: give permitted and prohibited examples. Embrace: still require accurate claims and ways to examine substance. Publish the rule before applications open.

Our policy boundary and examples applicants can understand

A neutral response supported by the rule and evidence

What we disclose about provider AI use and correction routes

6. Your 30 / 60 / 90-day plan

Slides 22–24 · Start with one small clerical pilot and fictional records.

Priorities to consider

Approved tools and data terms; minimized inputs; clear rubric descriptors; versioned prompts; evidence for draft scores; consistency tests; human decisions; a comparison audit; provider transparency; applicant policy and disclosure; no action on a detector alone; annual policy and tool review.

Three gaps and the people who will own them

30 days: draft policies, choose a clerical task and owner

60 days: test fictional cases and compare with human review

90 days: train reviewers, publish policy and schedule the audit

Review date, evidence of progress and a pause condition

Full prompts, vendor questions, disclosure example and glossary are in backups B1–B4. Session resources: https://mguhlin.github.io/nspa/2026/
