

Your workshop speaker’s guide

Miguel Guhlin | October 21, 2026 | 3:30-5:00 PM CT

How can we use AI to support scholarship review while strengthening human judgment, trust, and connection?

The experience to protect

People have time to think, hear another perspective, reconsider an assumption, and choose one change to try with a colleague. Twelve core slides carry the session. Six optional references answer questions afterward.

Before people arrive

Open the webdeck and conversation companion. Print the 10-page workbook: cover, activities on pages 2-7, and optional visual references on pages 8-10. Keep the prepared draft ready; no live AI call or participant account is required. Have a silent timer and a place to capture a few ideas. Invite paper, private reflection, and passing on speaking.

Time CT	Slides	Conversation
3:30-3:40	1-2	Start with trust
3:40-3:50	3-4	Stretch an assumption
3:50-4:10	5-6	Learn from another reading
4:10-4:15	7	Make room for reflection
4:15-4:35	8-9	Map and challenge a workflow
4:35-4:50	10-11	Practice a fair response
4:50-5:00	12	Choose one change together

Adjust the strategy, protect the learning

If time is short, shorten whole-room reporting and extra examples. Keep independent thinking, the two-minute silence, and the fair-response discussion. Move to slide 12 at 4:50. If a discussion matters, invite one useful follow-up and record the question for later.

SAY THIS gives friendly wording to adapt. PRESENTER CUE gives timing and facilitation reminders. Each core slide starts on a fresh page.

01. Welcome to the conversation

3:30-3:32 PM | Slides 1 | 2 minutes

Opening invitation | SAY THIS

Hi, everyone. I'm Miguel. Bring the judgment and experience you already use with scholarship applicants. You belong in this conversation whether you use AI every day or are still deciding where it fits.

Our question today is: How can we use AI to support scholarship review while strengthening human judgment, trust, and connection? By five o'clock, choose one change you can try with a colleague. The resources are there to help you carry it forward.

Participation and care | SAY THIS

Everything we use today is fictional. Keep real applicant information out of the tools and our stories. You can work on paper. No AI account is required. You're welcome to pass on speaking or share your thinking in writing. We will make room for different perspectives.

Your move | PRESENTER CUE

Keep this welcome to two minutes. Open the conversation companion and workbook before people arrive. The 12 core slides carry the session; slides 13-18 are optional references. Move to slide 2 at 3:32.

02. What makes a review worthy of trust?

3:32-3:40 PM | Slides 2 | 8 minutes

Invite a memory | SAY THIS

Think of a review process that built trust, or one that made trust harder. It can be a scholarship review or another experience. Leave out names and identifying details. What happened? What made the difference?

Take a quiet minute to write. Then each partner gets two minutes. Listen for what mattered to that person. You do not need to solve their story.

Hold the structure | PRESENTER CUE

3:32-3:33: silent writing. 3:33-3:35: partner A speaks. 3:35-3:37: partner B speaks. If there is a group of three, share the four minutes equally. 3:37-3:39: invite two brief observations from the room. Ask permission before repeating a personal story. Workbook page 2; conversation companion: Trust.

Make meaning together | SAY THIS

What did you hear that you want your own review process to protect? What would an applicant need to see or experience to trust that process?

Keep one quality from that conversation. We will return to it when we decide where AI fits.

If the room is quiet | PRESENTER CUE

Wait at least eight seconds after a question. Invite a written response or ask pairs to offer a shared observation. Use a concrete prompt if needed: Was the expectation clear? Could someone explain or correct a decision? At 3:40, move on.

03. How will we learn from each other?

3:40-3:43 PM | Slides 3 | 3 minutes

Name the experience | SAY THIS

We make sense of difficult work through conversation, relationships, and reflection. Today we will give ourselves time to think before we hear someone else's answer. Then we will compare perspectives and decide whether our first reading needs to change.

The purpose is a change in practice that helps our work. Changing your mind is welcome. Keeping your judgment and explaining why is welcome too.

Set a listening agreement | SAY THIS

When you disagree, try: 'Which detail led you there?' Before making your own point, say what you think you heard. Ask your partner whether you understood.

Can I stretch and challenge your thinking a little? Let's look at something that can feel useful before we have checked it.

Your move | PRESENTER CUE

Describe the four illustrated stages without giving a lecture about adult learning. Invite a nod or one comment about the listening agreement. This is a conversation routine participants can reuse with colleagues. Move to slide 4 at 3:43.

04. What could a polished summary hide?

3:43-3:50 PM | Slides 4 | 7 minutes

Introduce the tension | SAY THIS

A clear-looking summary can make a difficult task feel easier. What would you need to check before another reviewer relied on it?

We will use a prepared draft so everyone can examine the same answer. It is an authored teaching example, not a response from a model we just ran.

Reveal, then pause | PRESENTER CUE

3:43-3:45: open [conversation.html#tension](#) and read the intentionally flawed summary. Leave the correction closed. Give 30 seconds to notice and one minute for pairs to name a concern.
3:45-3:47: reveal P4 and P5 from the source. Invite people to identify what the draft got wrong.
3:47-3:50: debrief. Workbook page 2. A live AI call is optional and must not take activity time.

Connect the evidence | SAY THIS

P4 says the enrollment document is absent. The draft cannot turn that into a complete application. P5 is text inside the application. It cannot rewrite our review instructions. A missing document asks for follow-up; it does not establish ineligibility.

Which change to our request would make this easier to check? We can ask for source paragraphs, require missing items to remain visible, and keep eligibility decisions with a person.

Debrief | SAY THIS

What did the presentation of the answer encourage you to assume? Where would your team need a person to slow down and compare the source? Keep that question. Now let's read the application for ourselves.

05. One application, different readings

3:50-3:55 PM | Slides 5 | 5 minutes

Meet the case | SAY THIS

C-101 is our fictional applicant throughout the session. The packet describes a water systems certificate goal, service at a neighborhood repair table, and a missing enrollment document. You will also see the instruction we must ignore in P5.

Read P1 through P5 on workbook page 3 or in the companion. On your own, mark one detail you would rely on and one question you would ask. Hold your interpretation for a moment before discussing it.

Protect independent thinking | PRESENTER CUE

3:50-3:51: explain the fictional program requirements printed above the packet. 3:51-3:54: three minutes of quiet reading. 3:54-3:55: explain the scoring guide on workbook page 4. Leave the AI scoring reference closed. Read the packet aloud only if that helps access, and allow participants to keep reading.

Bridge to the discussion | SAY THIS

Our practice scoring guide asks about goal clarity, contribution, and reflection or adaptation. It gives descriptions for each rating. These are teaching examples, not a validated award-selection tool. You can mark insufficient evidence if the source cannot support a rating.

Let's focus on reflection or adaptation. Does the queue change in P3 meet that description? First decide for yourself. Then we will hear another reading.

06. What do you see that I might miss?

3:55-4:10 PM | Slides 6 | 15 minutes

Structure the comparison | SAY THIS

For three minutes, choose a provisional rating for reflection or adaptation and underline the words that support it. Write a question if the description leaves you unsure.

Then each partner gets two minutes to explain. The listener asks, 'Which detail led you there?' Try to understand the reason before trying to agree. For the next three minutes, choose one phrase in the scoring guide you would clarify.

Your move | PRESENTER CUE

3:55-3:58: independent rating. 3:58-4:02: two minutes each for partner reasons. 4:02-4:05: revise a scoring description. 4:05-4:10: debrief with two pairs. Workbook page 4; conversation companion: Shared case. Invite disagreement without making people defend personal worth. Other rubric rows remain optional.

Debrief the learning | SAY THIS

What did your partner notice that you missed? What assumption shaped your first reading? Did your judgment change, or did your reason become clearer?

The example supports a discussion: P3 connects a queue problem to a specific change. If your team expects explicit language about learning, clarify that expectation before applying the guide to real applicants. Do not average the ratings just to make disagreement disappear.

Connect to AI and practice | SAY THIS

If we later ask AI for a provisional rating, these human reasons give us something to compare it with. People can accept, revise, reject, or pause that draft. What would your team need to discuss before using the same scoring guide?

If participants ask for the answer | PRESENTER CUE

Explain that the source and agreed criterion determine the defensible judgment. The prepared calibration reference is an optional comparison after human reasoning, not the official correct score. Keep the full scoring demo in appendix slide 14 or the practice lab.

07. What are you reconsidering?

4:10-4:15 PM | Slides 7 | 5 minutes

Invite silence | SAY THIS

Let's give that conversation a little room. For the next two minutes, write privately: What am I reconsidering, and why? It can be an assumption about AI, a scoring rule, or how people learn from each other. You can also write a question that remains open.

I will leave the room quiet. You do not need to share what you write.

Hold the silence | PRESENTER CUE

4:10-4:12: two uninterrupted minutes. Keep slide 7 visible. Set a silent timer; do not narrate, fill pauses, or advance slides. 4:12-4:14: invite one or two voluntary reflections, including a written contribution. Workbook page 4. If nobody volunteers, acknowledge the reflection and continue without forcing participation.

Bridge to the workflow | SAY THIS

What might that reflection change about the way you work with colleagues? Keep your note. We will now turn one of these questions into a review process we can explain and challenge. We can change the strategy as we learn.

08. Where does our process need a person?

4:15-4:27 PM | Slides 8 | 12 minutes

Choose the work | SAY THIS

In groups of three or four, choose one small task for C-101. You might organize the required items or draft a question about the missing document. Start with the quality of trust you named earlier.

Map the route from approved input to an AI draft, an evidence check, a human decision, and a record. Name a role at each checkpoint. A person needs enough authority and time to correct or stop the work.

Your move | PRESENTER CUE

4:15-4:17: explain and form groups. 4:17-4:24: seven minutes to draw one route. 4:24-4:27: ask groups to test the route against P4 or P5 and write a pause condition. Workbook page 5; conversation companion: Checkpoints. One member records, one checks the source, one asks about the applicant experience. Rotate roles if useful.

Keep the checks concrete | SAY THIS

Before the tool: Who approves the service, settings, and information? Before relying on the draft: Who checks each claim against the packet? Before a decision: Who makes the call and handles a correction?

Finish this sentence: 'We will pause if ...' A missing privacy control or an invented source quote should send us back to a person who can resolve the concern.

If a group needs help | PRESENTER CUE

Offer the administrative completeness task. Keep practice fictional. Remind people that removing a name can leave identifying information. The protected-workflow reference has more detail for later. Keep this activity to one task rather than mapping the whole scholarship program.

09. What might another team question?

4:27-4:35 PM | Slides 9 | 8 minutes

Invite a useful challenge | SAY THIS

Share your route with a nearby group. Each group gets two minutes to explain its task, the people responsible, and its pause condition. The listening group asks one question that tests an assumption.

You might ask: What if the summary misses a required item? Can the reviewer reject the draft? Who helps the applicant correct a record? What will happen when the tool or our rules change?

Your move | PRESENTER CUE

4:27-4:31: two minutes per group to explain and receive a question. 4:31-4:33: revise the workflow. 4:33-4:35: hear one change from the room. Workbook page 5. If movement is difficult, exchange papers with the nearest group or make a listening pair within the group.

Debrief for impact | SAY THIS

What changed because another group challenged your thinking? How does that change protect the quality of trust you named at the start?

What conversation would your actual team need before trying this workflow? Keep the challenge and your revision. That is something useful to bring back, even if you decide to delay using AI.

10. What would a fair response sound like?

4:35-4:40 PM | Slides 10 | 5 minutes

Return to the applicant | SAY THIS

Continue the fictional C-101 case. A detector flags the goal statement, and the applicant says they used translation help. Our published practice rule permits translation assistance and requires factual claims to remain accurate. We have no evidence of invented experiences.

What concern, if any, do those facts justify? Take a quiet minute before you discuss it.

Your move | PRESENTER CUE

4:35-4:36: read the scenario and published rule on workbook page 6. 4:36-4:37: silent thinking. 4:37-4:39: pair discussion. 4:39-4:40: hear one observation. Conversation companion: Fair response. No detector or live tool is required.

Keep the boundary clear | SAY THIS

A detector flag alone does not establish misconduct. It also does not show whether the applicant violated our published rule. Translation help is permitted in this scenario. Avoid adding a disclosure requirement after the application arrives.

Your first decision may be that no misconduct follow-up is justified. If there is a specific concern under the published rule, explain it neutrally and give an accessible way to respond.

Source and scope | PRESENTER CUE

Turnitin advises against using its indicator as the sole basis for action. The studies in appendix slide 18 concern particular languages, writing samples, and detectors. They do not establish one universal error rate. This is a workshop discussion, not official NSPA policy. Source links are in the slide notes and hub.

11. How might it feel to receive our question?

4:40-4:50 PM | Slides 11 | 10 minutes

Draft, listen, revise | SAY THIS

Draft one message you could send to C-101. If you see no policy concern, say that and draft the ordinary enrollment-document follow-up instead.

One partner reads as the reviewer. The other listens from the applicant's perspective: What would I understand? What feels assumed? How could I respond? You can review the message silently instead of role-playing. Then revise it together.

Your move | PRESENTER CUE

4:40-4:43: three minutes to draft. 4:43-4:46: read and discuss from both perspectives. 4:46-4:48: revise. 4:48-4:50: debrief. Workbook page 6. Name a response method, reasonable response time, decision owner, and route for another review under local policy. Do not request private chat histories or sensitive personal information.

Debrief the difference | SAY THIS

Which phrase changed after you heard the applicant's perspective? How did that change make the message clearer or fairer?

What would you need to explain to applicants before the next cycle? The policy starter is available afterward. Today, keep the question you improved and the reasoning behind it.

A possible message, only after participants draft | PRESENTER CUE

Example: Thank you for explaining the translation support. Our published rule permits that assistance. We still need the enrollment confirmation listed in the requirements. Could you provide it through our approved submission channel, or contact our office if you need another way to respond? Add your locally appropriate deadline and contact. Do not treat this example as adopted policy.

12. One change, with someone to learn beside

4:50-5:00 PM | Slides 12 | 10 minutes

Choose a change | SAY THIS

Return to the quality of trust you named at the start. Choose one small change to your review practice. It might be asking for source evidence, giving reviewers time to compare reasons, or making an applicant message clearer.

Write the action, a colleague you will invite, and a date within the next 30 days. What would show that the change helped? What would tell you to pause or revise it? Keep any first AI tests fictional.

Your move | PRESENTER CUE

4:50-4:53: three minutes to plan on workbook page 7 or in the companion. 4:53-4:57: two minutes per partner to share and ask how the other will learn from the attempt. 4:57-4:59: invite two brief commitments. 4:59-5:00: close. The readiness checklist and fuller action plan are optional resources, not additional required activities.

Connect growth to impact | SAY THIS

Who helped you see something differently today? What will you carry into your next conversation with colleagues? Keep your plan somewhere you will return to it.

The workshop hub has the workbook, takeaways, and every resource we discussed. The full infographic library remains there for the questions that come next. You can change your approach as you learn.

Close | SAY THIS

Thank you for sharing your experience and listening to one another. I hope you leave with a question worth asking, a colleague to learn with, and one change that helps the people your program serves.

Finish on time | PRESENTER CUE

End at 5:00. Hold slide 12 as people leave. Export typed notes or keep the workbook. Do not advance into the appendix as part of the closing; use slides 13-18 only for a specific question or later reference.

Optional references, when a question calls for one

Slides 13-18 are outside the timed route. Keep the core conversation intact.

13. A request we can check

Task: What should it do? Criteria: Which published rules? Evidence: Which supplied sources? Limits: Which decisions stay human? Output: How can we check it?

14. A scoring description we can discuss

0: No learning or adaptation stated. 1: A learning claim without an example. 2: A specific change connected to an experience.

15. Approval before real applicant information

The service and settings: Access, storage, retention, deletion, and training use. The minimum information: Removing a name can leave identifying details. The people responsible: Approval, incident response, and correction.

16. A detector result needs context

What the indicator describes: Flagged qualifying prose, not a misconduct probability. What the studies establish: Findings depend on the language, sample, and detector. What people must decide: The published rule, evidence, and a fair response.

17. Resources for the question that comes next

Your conversation notes: The workbook and guided companion. A reference when needed: Prompts, privacy, fairness, and readiness. The full library: All infographics, guides, and earlier sessions.

18. Sources and scope

NIST, 2024: Generative AI risk management and oversight. Turnitin guidance: Interpretation of its AI-writing indicator. Research, 2023 and 2026: Different study contexts and qualified findings.

Sources and scope

Sources: NIST Gen AI Profile (2024); Turnitin detection FAQ (reviewed October 7, 2026); Liang et al., Patterns (2023); AI Ali, Helcl & Libovicky, EACL SRW (2026). See the hub for scope and interpretation.

Guidance reviewed October 7, 2026. Study findings depend on the tested writing, language, and detector. The cases, rubric, policy starter, and checklist are workshop teaching tools, not validated instruments or official NSPA policy. Recheck source guidance and local rules before real use.
