Trust, Transparency, and AI

Responsible scholarship review

Miguel Guhlin
NSPA 2026, San Antonio
October 21, 2026

AI-generated image of fictional people

ACTIVITY 1 2 MINUTES INDIVIDUAL VOTE

Your first judgment

Which task gives AI the most influence over who receives an award?

A

Flag a missing transcript

B

Summarize evidence of leadership

C

Rank the finalists

Vote A, B, or C. Tell a partner what could go wrong.

AI authority in the review process

A suggested boundary for your local policy

ASSIST

Organize files and inventories.

CHECK

Verify quotations and rubric matches.

HUMAN

Decide awards, exceptions, and appeals.

ACTIVITY 2 3 MINUTES PAIRS

Task sorting with a safeguard

Assign ASSIST, CHECK, or HUMAN. Add one safeguard for each task.

Fictional task	Your category	Required safeguard
List applications missing a reference	_____	_____
Link an essay quote to a rubric criterion	_____	_____
Decide whether to waive a deadline	_____	_____
Select the scholarship recipients	_____	_____

Share one classification your pair debated.

Two gates before an upload

Both conditions must be satisfied for the task and the information.

01 Approved use

Tool, access, retention, reuse, and response plan.

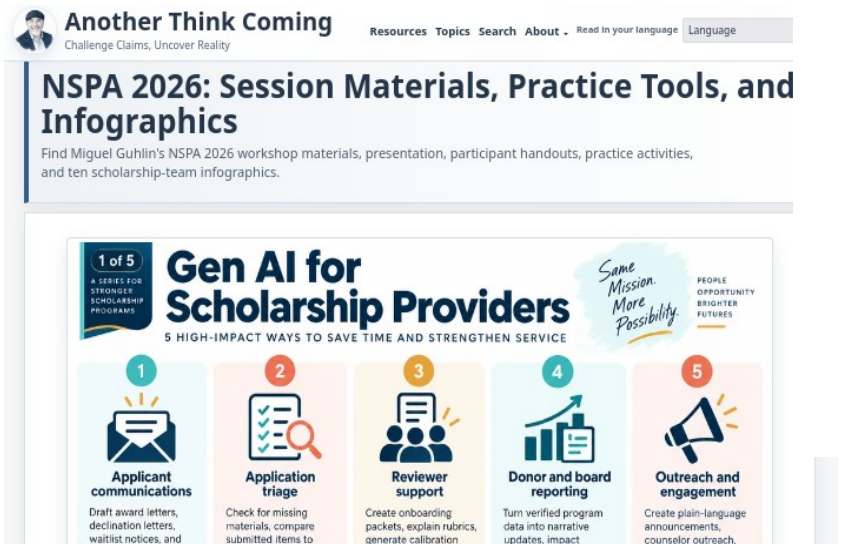

02 Only needed data

Application code, relevant excerpt, rubric criterion, and source pointer.

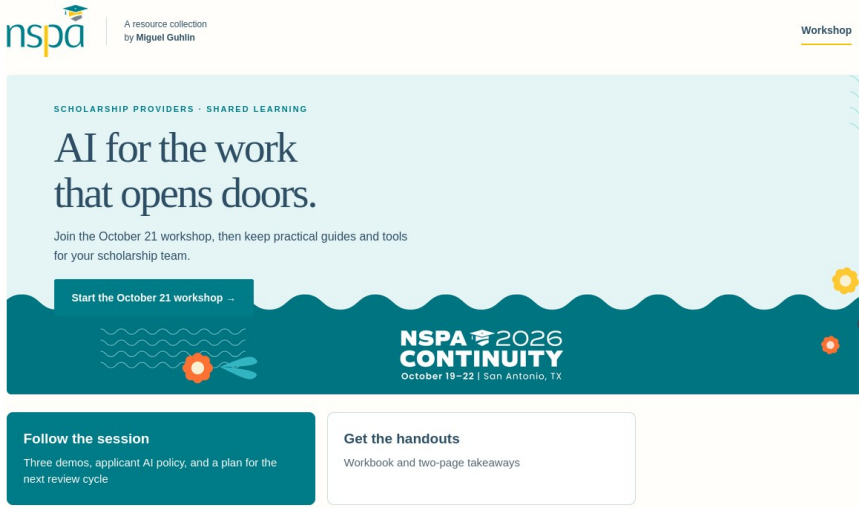

Session Resources

https://mguhlin.github.io/nspa

A prompt reviewers can check

Each instruction should produce something a person can verify.

01 **TASK**

One excerpt. One criterion.

02 **SOURCE**

Only the supplied text and rubric.

03 **EVIDENCE**

Quote, locate, and identify gaps.

04 **LIMIT**

No trait inferences, rankings, or awards.

ACTIVITY 3 4 MINUTES PAIRS

A prompt repair lab

Rewrite this request so a reviewer can inspect the result.

WEAK REQUEST

“Review all applications and choose the strongest students.”

1. Name one criterion and its source.
2. Ask for a quote and a gap.
3. Limit what AI may decide.

Exchange prompts. Could you verify every requested output?

A shared scoring anchor

Fictional teaching rubric: community engagement

POINTS	Evidence in the supplied excerpt
0	No relevant activity described
1	Activity named, but the applicant’s role is unclear
2	Applicant’s contribution is specific
3	Specific contribution and a supported result

Use these same anchors for the next two cases.

ACTIVITY 4 5 MINUTES PAIRS

An evidence audit

Fictional application A17, paragraph 2

APPLICANT EXCERPT

“I organized 12 weekend tutoring sessions for sixth graders and recruited two volunteers.”

SAMPLE AI SUMMARY

“Founded a program serving 120 students. Improved grades by 20%. Strong leadership. Score: 3 of 3.”

Mark supported claims. Rewrite the summary. Choose an anchor.

A reviewable handoff

Fictional A17 after a person checks the source

2/3

Specific role
Result missing

FIELD	Checked record
Evidence	“organized 12 weekend tutoring sessions”
Source	A17, paragraph 2 Applicant-reported statement
Open question	What evidence shows the outcome of the sessions?

ACTIVITY 5 4 MINUTES INDIVIDUAL, THEN PAIRS

A fairness calibration

Score each fictional excerpt using the same community-engagement anchors.

A

“I coordinated twelve weekend tutoring sessions for grade-six learners and recruited two volunteers.”

B

“I set up 12 weekend tutoring days for sixth graders. I got two volunteers to help.”

Did your scores differ? Which evidence justified the difference?

The review path and its owners

Each handoff needs a named person who can correct it.

01 **RECEIVE**

Staff check requirements and exceptions.

02 **MINIMIZE**

Staff approve the tool and necessary data.

03 **PREPARE**

AI may organize files and map quotations.

04 **VERIFY**

Reviewer checks evidence and corrects the record.

05 **DECIDE**

Committee records reasons and the reconsideration route.

ACTIVITY 6 4 MINUTES SMALL GROUPS

Applicant use boundary sort

Sort each use: permit, prohibit, or needs a clearer local rule.

CASE	Fictional use	Your decision
A	Proofread the applicant’s truthful draft	_____
B	Translate the applicant’s own statement	_____
C	Invent a community-service achievement	_____
D	Draft most of the essay from truthful notes	_____

Which uses require disclosure under your proposed policy?

What an AI detector can get wrong

A detector label cannot establish authorship on its own.

FALSE POSITIVE

Human-written text gets flagged.

FALSE NEGATIVE

AI-generated text goes unflagged.

A score alone cannot settle eligibility.

Source: Turnitin, Using the AI Writing Report

ACTIVITY 7 4 MINUTES GROUPS OF THREE

A flagged essay case conference

Fictional case: a detector flags the essay. Activities and references agree.

Agree on the next action and what would justify it.

PUBLISHED RULE

Proofreading is allowed. Claims must be truthful. Translation and disclosure are unspecified.

REVIEWER

What evidence needs checking?

APPLICANT

What neutral question could you answer?

OBSERVER

Which published rule applies?

A documented response to a concern

Suggested process for consistent human review

01

PAUSE

Hold automatic penalties.

02

CHECK

Read the evidence and the published rule.

03

CLARIFY

Invite an explanation when appropriate.

04

RECORD

Document reasons and the reconsideration route.

Policy language people can use

Illustrative applicant guidance for local adaptation

UNCLEAR

“AI-generated applications may be disqualified.”

MORE SPECIFIC

You may use AI to brainstorm, outline, or proofread. Write your own statement and verify every claim. Disclose the tool and type of help. Staff review concerns under the published rules. A detector score alone will not decide eligibility. You may request reconsideration.

Local choices: translation, disclosure method, review contact, and deadlines.

ACTIVITY 8 6 MINUTES SMALL GROUPS

A policy drafting lab

Write one usable sentence for each audience or situation.

FOCUS	Your sentence must specify
Applicants	Allowed help, truthful work, and when to disclose
Reviewers	Approved task and tool, evidence check, and owner
Concerns	Evidence review, clarification, and reconsideration

Exchange drafts with another group.

Could a new applicant or staff member act on each sentence?

Sample response: Applicants

SAMPLE RESPONSE

You may use AI to brainstorm, outline, or proofread, but you must write your own statement, verify each claim, and disclose the tool and type of help.

WHY IT WORKS

- Allowed help: Names brainstorming, outlining, and proofreading.
- Truthful work: Requires the applicant's own statement and verification of every claim.
- Disclosure: Identifies the tool and the type of help received.

Local choice: Specify where and when applicants disclose AI help.

Sample response: Reviewers

SAMPLE RESPONSE

Use only the approved service for evidence extraction, and the assigned reviewer must verify each quote and source before the committee acts.

WHY IT WORKS

- Approved use: Limits the task to evidence extraction in an approved service.
- Evidence check: Requires verification of each quote and its source.
- Accountability: Names the assigned reviewer and sets the check before committee action.

Local choice: Name the approved service and assign the reviewer.

Sample response: Concerns

SAMPLE RESPONSE

Staff review the evidence and published rule, invite clarification when appropriate, and provide a contact for reconsideration.

WHY IT WORKS

- Evidence review: Connects the concern to evidence and a published rule.
- Clarification: Gives the applicant a chance to explain when appropriate.
- Reconsideration: Provides a contact for requesting another review.

Local choice: Identify the contact, review steps, and response timeline.

A four-week pilot

Suggested sequence before any authorized use with real applications

WEEK 1 **SCOPE**

One task. One owner.

WEEK 2 **TEST**

Fictional cases. Log errors.

WEEK 3 **REVISE**

Compare, correct, and retest.

WEEK 4 **DECIDE**

Proceed, revise, or stop.

ACTIVITY 9 2 MINUTES INDIVIDUAL COMMITMENT

Your next review-cycle decision

Write a commitment a colleague could follow.

TASK One task we will test: _____

CHECK A person must verify: _____

OWNER Who and by when: _____

Share your commitment with a partner before you leave.

Take-home review prompt

For fictional or explicitly approved, minimized information only

TASK AND SOURCE

Using only the supplied excerpt and published rubric, compare the evidence with one criterion.

OUTPUT

Return the criterion, an exact quote, its source location, missing evidence, and one neutral follow-up question.

BOUNDARY

Do not invent facts, infer traits, rank applicants, or recommend awards.

Resources for your team

Starting points for local review practices

01

NIST Generative AI Profile

A voluntary resource for identifying and managing AI risks.

02

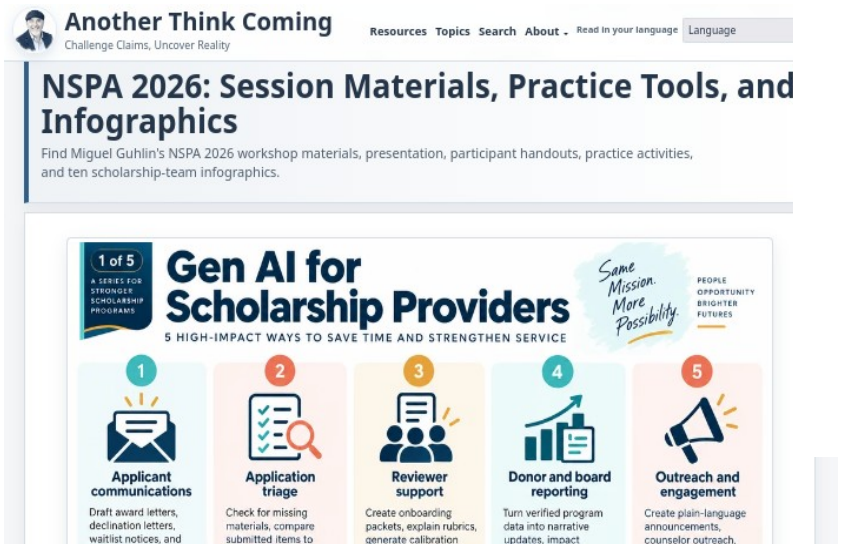

Turnitin AI Writing Report guidance

Detection limits and the need for human judgment.

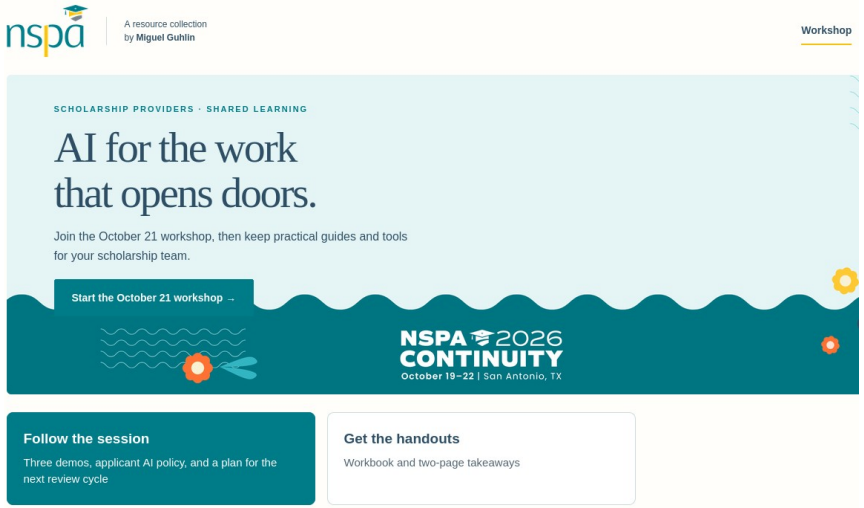

Pair these resources with your published rules and approved-tool requirements.
