AI Prompting for Scholarship Review

Everyday language, clear examples, and practice in ChatGPT

Miguel Guhlin

NSPA 2026 · October 21

My starting point

Eight short situations and one next step

What would I do in each situation?

Which idea would I like to practice?

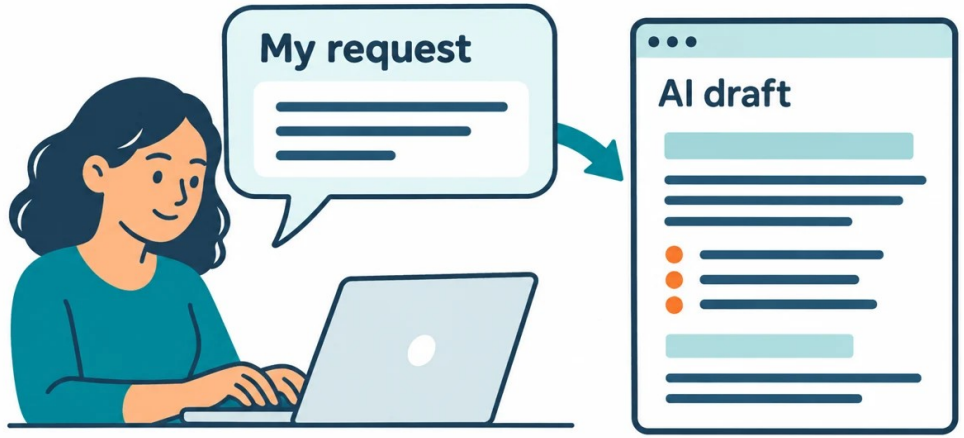

Open my awareness self-check

What generative AI does

It creates a draft from your request and the information available to it.

It can help write, summarize, and organize.

It can also leave things out or add incorrect details.

Words for our first chat

A prompt is simply your request.

Word	Everyday meaning
Chatbot	The app you talk with, such as ChatGPT
Model	The AI system the app uses to create an answer
Prompt / input	Your request and the information you give it
Response / output	The answer or draft you receive

A first request

One small job using a made-up note

> Using this note only, write a friendly one-sentence reminder: “Applications close October 1.”

No real applicant information is needed.

I can check the date and length myself.

Try the first request

Useful background information

Context means the information that helps AI do the job.

Detail	Our reminder example
Audience: who will read it	Students applying for a scholarship
Tone: how it should sound	Friendly and direct
Source: where facts come from	The supplied deadline note
Limit: what it must avoid	No invented dates, links, or promises

A clearer request

The same job with the useful details included

> Write a friendly reminder for scholarship applicants. Use only this note: “Applications close October 1.” Write one sentence. Keep the date exactly as written. Do not add links or promises.

Job + source + audience + format + limits

What a good answer looks like

Evaluation criteria are the checks we choose in advance.

> Prepared example: “A friendly reminder: scholarship applications close October 1.”

Correct date: October 1

Requested format: one sentence

No added rules, links, or promises

Improving a request

A short practice cycle

Step	What I do
1. Choose the task	Name one result I need
2. Write a request	Add the facts and limits that matter
3. Try and check	Compare the answer with my checks
4. Improve and save	Fix a problem; keep the useful request

Examples and follow-up requests

You can show the style you want and ask for a change.

> Follow-up: “Make it warmer. Keep one sentence and keep October 1 unchanged.”

An example shows the kind of answer I want.

A follow-up improves the answer I just received.

A sequence of small requests is often called prompt chaining.

AI can add a false detail

A confident answer still needs a fact check.

Original: “I ran 12 tutoring sessions.”

AI added: “Grades improved by 20%.”

The original does not support the added claim.

Files in the practice packet

File endings tell us what kind of file we are opening.

Ending	What it means here
.csv	A simple table, such as the application records
.md	Plain text with simple headings; called Markdown
.txt	Plain text, such as a saved prompt
.pdf	A document with a fixed page layout

A person owns the decision

AI can prepare a checklist. Staff check it and decide.

Use the AI account and information your organization allows.

Names removed from a file do not remove every identifying detail.

Practice here uses made-up information.

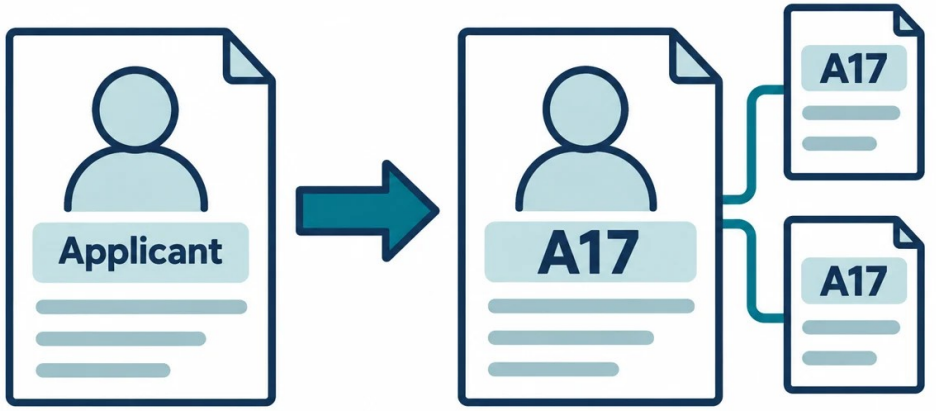

Applicant codes in our examples

A17, A18, and A19 are made-up labels used instead of names.

The same code connects one applicant's records.

A17-transcript.pdf means the transcript file for applicant A17.

A code alone does not make real information anonymous.

A code replaces a name

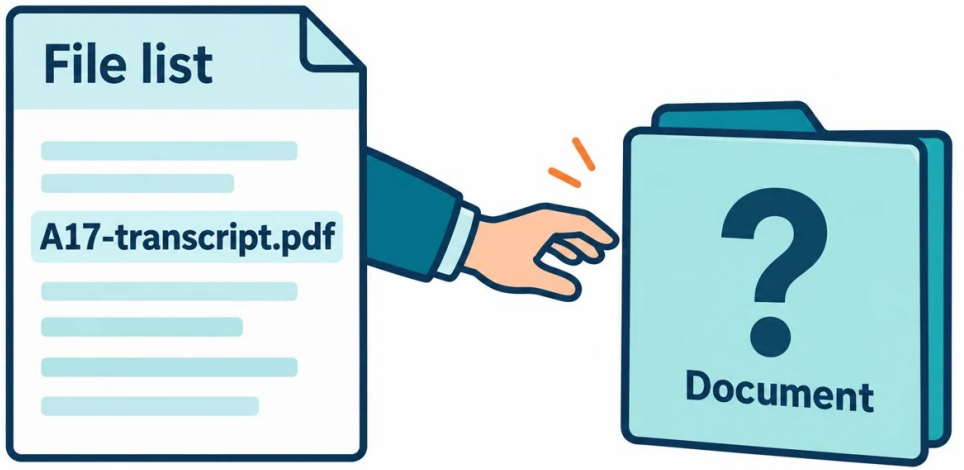

A manifest is a file list

A listed file name tells us what to look for.

manifest.csv lists pretend document names.

The pretend PDFs are not included.

A person must open an actual document to check its contents.

Words in a scoring guide

A rubric describes how to award points.

Word	What it means
Criterion	The part we are judging, such as community contribution
Anchor	The description of what earns a particular score
Evidence	The original words or facts supporting a score
Provisional score	A suggested score for a person to check

Our three ChatGPT demonstrations

One task at a time, with a person checking the answer

Task	What AI prepares	What staff check
Organize files	A list for each applicant	Every item on the original file list
Check office records	Missing items and late dates	Actual records and any exceptions
Use a scoring guide	Quotes and a suggested score	Original words and the scoring rule

Open the three demonstrations

Starting the practice in ChatGPT

A fresh chat is enough for these exercises.

Download and unzip the practice packet.

Start a new chat and supply only the files named for that task.

Paste the supplied instructions, then the task prompt.

Compare the answer with the original files.

Open the setup steps

Demo 1: organizing application files

The job is to make the file list easier to inspect.

> For each applicant code, list the file names, note any gaps in the list, and show where you found the information. Do not decide who qualifies.

Files: manifest.csv and applications.csv

The practice page provides the full copyable prompt.

Open and copy the full organization prompt

Demo 1: checking the file list

Prepared teaching example; compare your actual answer with the files.

Code	What the list shows	Staff follow-up
A17	Statement, transcript, reference	Open and check the documents
A18	No reference listed	Check the actual records
A19	No transcript listed; extra-time request	Check records and the request

Demo 2: checking office records

AI can flag a missing item or late date for staff.

> Compare the listed items and application dates with the program rules. Show the rule and the original record for each concern. Staff decide what happens next.

Files: program-rules.md, manifest.csv, applications.csv

Fictional deadline: October 1, 2026

Open and copy the full administrative prompt

Demo 2: the late application

A19 is the applicant code for this made-up case.

Original record	What it tells us
Recorded date: October 2	After the October 1 deadline
Extra time requested	Staff need to review the request
No transcript on the list	Staff need to check the actual records

A staff member applies the rules and records the reason.

The community contribution scoring guide

Each anchor describes what earns that score.

Anchor	Community contribution evidence
0	No relevant activity described
1	Activity named, but applicant role unclear
2	Specific applicant contribution
3	Specific contribution and a supported result

Demo 3: matching words to the guide

A suggested score needs a quote and a reason.

> Compare A17 and A18 with the community contribution guide. Quote the original words, suggest a score, and explain what information is missing. A person checks the score.

Files: statements.md and rubric.md

Source location = where to find the original words

Open and copy the full scoring prompt

The same work earns the same contribution score

Prepared teaching comparison

Code	Statement summary	Suggested score
A17	12 tutoring sessions; recruited 2 volunteers	2 of 3
A18	12 tutoring days; got 2 volunteers to help	2 of 3

Both describe a specific contribution.

Neither excerpt supplies a supported result.

A ChatGPT Project

A place to keep related chats, files, and instructions together

One chat	A Project
Useful for a single task	Useful when related work continues
Supply the task information	Keep shared practice files available
Give instructions for this chat	Add instructions for the Project

Optional next step: Scholarship Review Practice

Instructions for repeated work

Instructions are the rules I want AI to follow.

> Use only the supplied practice files. Show the original words and where to find them. Say when information is missing. Leave final decisions to staff.

A prompt names today's task.

Project instructions apply to work inside that Project.

Read or copy the complete practice instructions

A skill is a reusable recipe

It saves the steps for a task I expect to repeat.

Recipe part	Evidence-review example
Ingredients	An applicant excerpt and the scoring guide
Steps	Quote, compare, explain a gap
Check before use	Try examples where I know the answer

Explore the reusable evidence-review skill

Fair rules for applicant use of AI

Applicants need clear expectations before they apply.

State what help is allowed and what must be disclosed.

A tool's "AI-written" flag can be wrong.

Staff check concerns and give applicants a fair chance to explain.

Read the policy examples

My next small practice task

One request I can check myself

Choose one made-up note or practice file.

Write the result I want and what must stay accurate.

Check the answer against the original.

Keep the request and note what I had to fix.

Return to my awareness self-check

Practice and reference materials

The participant page brings the materials together.

Presentation PDF and a plain-language word guide

Copyable ChatGPT prompts and made-up practice files

Awareness self-check and further examples
