

Responsible review capacity matrix

Page 1 of 2 | Choose the highest statement you can demonstrate. No overall score; this is not a certification.

Capacity / evidence	1. Explore	2. Practice	3. Apply	4. Improve
Task scope & human ownership Evidence: A workflow with a named owner and one stop condition. AI task guide 2/2/2 framework Today: ____ Next: ____	I am aware of the difference between organizing information and making an award decision .	I know how to define a bounded task using a fictional application.	I can name the human decision owner and explain when to escalate a concern.	I can use errors, overrides, and applicant feedback to improve a review workflow .
Structured prompting Evidence: A prompt plus a corrected evidence table. Prompt practice Workflow prompting workshop Today: ____ Next: ____	I am aware of the parts of a structured prompt : task, criteria, evidence, limits, and output.	I know how to draft and test a prompt with synthetic data .	I can track prompt versions and verify each output against its sources.	I can retest prompt changes and share failures and revisions with colleagues.
Rubrics & reviewer calibration Evidence: An anchored rubric and a disagreement log. Workshop rubric Reviewer onboarding Today: ____ Next: ____	I am aware of how observable criteria and scoring anchors guide a review.	I know how to score a fictional case independently and compare my reasons with a colleague.	I can calibrate ratings with other reviewers and document disagreements and overrides.	I can identify inconsistent or inequitable scoring patterns , revise the rubric, and retest it.

Priority: _____ Next action: _____

Evidence: _____ Owner: _____ Date: _____

Capacity / evidence	1. Explore	2. Practice	3. Apply	4. Improve
Data protection & approved tools Evidence: A documented data gate and service approval decision. Protected workflow reference Application triage example Today: ____ Next: ____	I am aware of sensitive applicant data and why it needs protection when using AI.	I know how to practice data minimization and an approval check with synthetic data.	I can check service terms , access, retention, deletion, and who handles an incident.	I can review approved AI uses and identify when settings, contracts, or access need updating.
Applicant AI use & fair response Evidence: A policy starter and one worked response scenario. Policy lab Fair response reference Today: ____ Next: ____	I am aware that AI detectors can produce false positives and cannot prove a rule violation.	I know how to explain permitted AI uses, disclosure requirements, and a fair follow-up.	I can apply published rules and offer an accessible explanation and review or appeal route.	I can use policy outcomes to identify and revise confusing or unfair requirements.
Pilot evaluation & transparency Evidence: A pilot plan with baseline, measures, owner, and stop rule. 30-day action plan 2/2/2 pilot framework Today: ____ Next: ____	I am aware of AI errors that could harm an applicant.	I know how to test fictional applications against a human reference .	I can record source errors, omissions, review time, and stop conditions during a pilot.	I can explain the review process to others and monitor results after changes.
