

Responsible review capacity matrix

Page 1 of 2 | Choose the highest descriptor you can demonstrate. No overall score; this is not a certification.

Capacity / evidence	1. Explore	2. Practice	3. Apply	4. Improve
Task scope & human ownership Evidence: A workflow with a named owner and one stop condition. AI task guide 2/2/2 framework Today: ____ Next: ____	I can distinguish organizing information from deciding an award.	I can define a bounded task using a fictional packet.	Our workflow names the human decision owner and escalation route.	We review errors, overrides, and applicant feedback on a schedule.
Structured prompting Evidence: A prompt plus a corrected evidence table. Prompt practice Workflow prompting workshop Today: ____ Next: ____	I can identify task, criteria, evidence, limits, and output.	I can draft and test a constrained prompt with synthetic data.	Our team uses a versioned prompt and checks its output against sources.	We retest changes and share examples of failures and revisions.
Rubrics & reviewer calibration Evidence: An anchored rubric and a disagreement log. Workshop rubric Reviewer onboarding Today: ____ Next: ____	I can explain an observable criterion and its scoring anchors.	I can score the same fictional case independently and compare reasons.	Our reviewers calibrate before use and record disagreements and overrides.	We examine consistency and inequitable patterns, then revise and retest.

Priority: _____ Next action: _____

Evidence: _____ Owner: _____ Date: _____

Capacity / evidence	1. Explore	2. Practice	3. Apply	4. Improve
Data protection & approved tools Evidence: A documented data gate and service approval decision. Protected workflow reference Application triage example Today: ____ Next: ____	I can identify sensitive data and why a public chatbot is not a default destination.	I can rehearse minimization and a data approval gate with synthetic data.	We verify service terms, access, retention, deletion, and incident ownership.	We audit approved uses and revisit settings, contracts, and access over time.
Applicant AI use & fair response Evidence: A policy starter and one worked response scenario. Policy lab Fair response reference Today: ____ Next: ____	I can distinguish a detector signal from proof of a rule violation.	I can explain permitted uses, disclosure, and a fair follow-up.	Our published rules include accessible explanations and review or appeal.	We review policy outcomes and revise confusing or unfair requirements.
Pilot evaluation & transparency Evidence: A pilot plan with baseline, measures, owner, and stop rule. 30-day action plan 2/2/2 pilot framework Today: ____ Next: ____	I can name an error that could harm an applicant.	I can test a small fictional set against a human reference.	Our pilot logs source errors, omissions, review time, and stop conditions.	We publish appropriate process information and monitor after changes.
