

TRUST, TRANSPARENCY, AND AI

Building Responsible Scholarship Review Practices

Three things to take home

Useful starting points for your scholarship program

01

A clearer AI request

One task, clear limits, an answer you can check.

02

A plan for checking the work

Name the people who check and decide.

03

A fair way to respond

Explain the rules and invite questions.

Keep your drafts. Adapt them with your colleagues.

People make the decisions

AI can help organize the information

AI can help

Sort information and draft a summary.

People check

Compare the answer with the application.

People decide

Apply the rules and make the call.

AI-generated image · fictional people

Use only made-up application information today.

Where are you today?

Mark one blank box beside each statement

Ready to learn

I want to learn how.

In progress

I am working on this.

Ready to go

I can do this now.

Open the capacity checklist. Pick one statement that matters to you.

Give the AI a clear job

Five parts of a request you can check

Ask it to show where each answer came from.

Remove the guesswork

A clearer request makes checking easier

Too much to guess

“Find our best applicants.”

A job we can check

“List required items, show the source, mark gaps, and suggest a follow-up.”

What would the tool still have to guess?

Activity: improve your request

Five minutes with a partner

2 minutes

Choose one small review task.

2 minutes

Write the request and its limits.

1 minute

Swap requests. Remove one guess.

Keep your revised request as a workshop takeaway.

Meet our practice applicant

C-101 is entirely fictional

P2: a goal

A certificate and a concrete next step.

P3: a service example

Helping at a neighborhood repair table.

P4 and P5: two checks

A missing document and a trick instruction.

AI-generated image · fictional people

A missing document does not prove someone is ineligible.

Demo: organize, then check

Build a table of what is present, missing, or unclear

01

Give the task

Use the practice request and fictional packet.

02

Get the draft

Ask for facts, paragraph labels, and gaps.

03

Check the answer

Compare every claim with the application.

The tool is not choosing a winner.

What can we support?

A prepared teaching example for checking the live answer

Present

Goal in P2; service example in P3.

Missing

Enrollment document: not included in P4.

Ignore the trick

P5 cannot change our review instructions.

Correct the table before another reviewer relies on it.

Activity: check one row

Four minutes with your partner

01

Find it

Locate the supporting paragraph.

02

Question it

Look for an added, missing, or mistaken detail.

03

Fix it

Write one correction or follow-up question.

A neat-looking answer still needs to be checked.

Use the same scoring guide

Look for stated details, not polished writing

Clear goal

0: no goal | 1: goal | 2: goal + next step

Contribution

0: none | 1: named | 2: specific actions

Learning or change

0: none | 1: claim | 2: change + experience

If the source is missing or contradictory, ask for more information.

Compare your reasons first

Six minutes before seeing an AI rating

2 minutes: on your own

Rate each area and note the supporting detail.

2 minutes: with a partner

Compare the reasons behind your ratings.

2 minutes: clarify the guide

Rewrite one description that caused confusion.

AI-generated image · fictional people

A useful disagreement can reveal an unclear scoring rule.

Demo: compare the AI draft

Use your own ratings as the starting point

Keep the original human rating and explain any change.

Before using real information

Check the tool, the information, and the people responsible

Is this use approved?

Ask the people responsible for privacy and the service.

What information is needed?

Share only what this specific task requires.

What happens to it?

Check access, storage, deletion, and problem reporting.

AI-generated image · fictional people

Removing a name may not be enough to protect someone.

Activity: name the checkpoints

Six minutes to map one job

Finish this sentence: “We will stop and check if ...”

A detector flag is not proof

Start with the published rule and the actual concern

People can be wrongly flagged

AI-written text can also be missed.

Results depend on context

The tool, language, and type of writing matter.

A person needs to review

A score alone cannot establish wrongdoing.

AI-generated image · fictional people

Never use a detector score alone to deny an award.

Small error rates affect people

A made-up example, not a claim about a particular detector

The diagram illustrates a calculation with three components. On the left, a teal circle containing a document icon is positioned above the number '1,000'. In the middle, a teal circle containing a question mark icon is positioned above '1%'. On the right, a teal circle containing a person icon is positioned above the number '10'. These three components are connected by a multiplication symbol '×' and an equals sign '=', forming the equation: 1,000 × 1% = 10.

Essays written entirely by
people

Assumed rate of incorrect
flags

People wrongly flagged

This does not tell us the chance that a flagged person used AI.

Make the rules clear before people apply

Give examples of what is allowed and what is not

Allowed help

Spell out editing, translation, and brainstorming.

An explanation

Say when applicants should describe the help used.

Not allowed

Define invented experiences and false records.

Include a way to ask questions and request another review.

Activity: ask without assuming

Six minutes: a flagged essay and reported translation help

Read the published rule

What did applicants actually agree to?

Draft a fair question

Ask for an explanation without assuming wrongdoing.

Name the next person

Who reviews the concern or a request for another look?

AI-generated image · fictional people

Translation help, writing style, and a flag are not proof of dishonesty.

Choose a skill to work on

Six sections in your capacity checklist

Where AI fits

Writing clear requests

Using a scoring guide

Protecting information

Responding fairly

Trying a small change

Use the resource links beside each section for your next step.

Activity: mark, choose, and plan

Five minutes to choose something you can use

01

Mark today

Ready to learn, in progress,
or ready to go?

02

Choose one statement

What would help your work
most?

03

Write a next step

Add a question, a small
action, and a date.

Export or print your checklist and plan to keep a copy.

Try one small change this month

Start with made-up applications

Week 1

Choose the task, people, and checks.

Week 2

Try it. Keep a record of errors and corrections.

Weeks 3-4

Review what happened. Adjust, stop, or seek approval.

Decide what success looks like and when you would pause.

What will you take back?

Three minutes: write, share, and choose

One clearer request

What will you ask the AI to do differently?

One check

Where will a person check or pause the work?

One rule to clarify

What should applicants know before they apply?

AI-generated image · fictional people

Choose a next step you can explain to a colleague.

Keep the materials close

Questions and next steps
