Responsible scholarship review

October 21, 2026 · 3:30–5:00 PM CT

Nine activities for responsible scholarship review

All cases, rubric anchors, and sample outputs are fictional teaching examples. Each activity includes the information I need. No real applicant records or live AI account are required.

Pages 2–10 follow the nine activities. Page 11 is a reusable review prompt. I can use this workbook or the session companion to keep my notes.

1. Your first judgment

Slide 3 · 2 minutes · Individual, then pairs

Which task gives AI the most influence over who receives an award?

Choice	Task
A	Flag a missing transcript
B	Summarize evidence of leadership
C	Rank the finalists

Choose A, B, or C. Tell a partner what could go wrong and what a person would need to check.

My choice, the risk I see, and the evidence I would check

2. Task sorting with a safeguard

Slides 4–6 · Activity 2 · 3 minutes · Pairs

Assign ASSIST, CHECK, or HUMAN to each task. Add a specific safeguard and the person responsible.

ASSIST: AI helps organize routine information. A person confirms requirements and exceptions before acting on the result.

CHECK: AI suggests an evidence match or interpretation. A reviewer verifies each quotation, source location, and rubric match before using it.

HUMAN: A person makes the judgment or decision, including awards, exceptions, and appeals. AI does not make that decision.

A safeguard is a concrete check or limit. The owner is the person who carries it out. For example: the program coordinator checks a missing-document flag against the application requirements before contacting the applicant.

Fictional task	My category	Safeguard and owner
List applications missing a reference		
Link an essay quote to a rubric criterion		
Decide whether to waive a deadline		
Select the scholarship recipients		

Before an upload, both gates must be satisfied: approved use (tool, access, retention, reuse, and response plan) and only needed data (code, excerpt, criterion, and source pointer).

One classification we debated and the safeguard we chose

3. A prompt repair lab

Slides 8–10 · Activity 3 · 4 minutes · Pairs

Review all applications and choose the strongest students.

Replace this weak request. Name one criterion and its source. Ask for a quote, its location, and a gap. Limit what AI may decide. Exchange prompts and check whether each requested output can be verified.

Fictional teaching rubric: community engagement. Use these same anchors for both cases. A real program uses its published rubric.

Points	Evidence in the supplied excerpt
0	No relevant activity described
1	Activity named, but the applicant’s role is unclear
2	Applicant’s contribution is specific
3	Specific contribution and a supported result

Practice input: fictional A17, paragraph 2. I organized 12 weekend tutoring sessions for sixth graders and recruited two volunteers.

My repaired prompt with the task, source, evidence requirement, and boundary

4. An evidence audit

Slides 10–12 · Activity 4 · 5 minutes · Pairs

Fictional teaching rubric: community engagement. Use these same anchors for both cases. A real program uses its published rubric.

Points	Evidence in the supplied excerpt
0	No relevant activity described
1	Activity named, but the applicant’s role is unclear
2	Applicant’s contribution is specific
3	Specific contribution and a supported result

Applicant excerpt: fictional A17, paragraph 2.

I organized 12 weekend tutoring sessions for sixth graders and recruited two volunteers.

Intentionally fabricated sample AI summary:

Founded a program serving 120 students. Improved grades by 20%. Strong leadership. Score: 3 of 3.

Mark supported and unsupported claims. Rewrite the summary, choose a scoring anchor, and write a neutral follow-up question. Preserve the quote and source pointer in your handoff.

Supported claims, corrected summary, anchor and reason, and my follow-up question

5. A fairness calibration

Slide 13 · Activity 5 · 4 minutes · Individual, then pairs

Fictional teaching rubric: community engagement. Use these same anchors for both cases. A real program uses its published rubric.

Points	Evidence in the supplied excerpt
0	No relevant activity described
1	Activity named, but the applicant’s role is unclear
2	Applicant’s contribution is specific
3	Specific contribution and a supported result

Excerpt A

I coordinated twelve weekend tutoring sessions for grade-six learners and recruited two volunteers.

Excerpt B

I set up 12 weekend tutoring days for sixth graders. I got two volunteers to help.

Score each excerpt independently, then compare with a partner. Did your scores differ? Which evidence justified the difference? One calibration exercise cannot establish that a workflow is fair.

My scores for A and B, the evidence, and a difference we need to examine

6. Applicant use boundary sort

Slide 15 · Activity 6 · 4 minutes · Small groups

Sort each use: permit, prohibit, or needs a clearer local rule. Decide which uses would require disclosure under your proposed policy.

Case	Fictional use	My decision
A	Proofread the applicant’s truthful draft	
B	Translate the applicant’s own statement	
C	Invent a community-service achievement	
D	Draft most of the essay from truthful notes	

The local rule must address truthful claims, authorship assistance, translation, and disclosure. Do not assume a universal disclosure requirement.

Our four classifications, disclosure decision, and one unresolved local choice

7. A flagged essay case conference

Slides 16–18 · Activity 7 · 4 minutes · Groups of three

Fictional case: a detector flags an essay. The activities and references agree.

Published rule: Proofreading is allowed. Claims must be truthful. Translation and disclosure are unspecified.

Role	Question
Reviewer	What evidence needs checking?
Applicant	What neutral question could you answer?
Observer	Which published rule applies?

Agree on the next action and what would justify it. A detector can flag human-written text or miss AI-generated text. A score alone cannot settle eligibility. Pause penalties, check evidence and rules, invite clarification when appropriate, and record reasons and reconsideration.

Our next action, needed evidence, neutral question, and human decision owner

8. A policy drafting lab

Slides 19–23 · Activity 8 · 6 minutes · Small groups

Write one usable sentence for each row. Exchange drafts with another group and revise. Mark one unresolved local choice.

Focus	My sentence must specify
Applicants	Allowed help, truthful work, and when to disclose
Reviewers	Approved task and tool, evidence check, and owner
Concerns	Evidence review, clarification, and reconsideration

A new applicant or staff member should be able to act on each sentence. The presentation and companion include sample responses for comparison after drafting.

My applicant sentence, reviewer sentence, concern sentence, and unresolved choice

Local choices to resolve: disclosure method and timing; approved service and assigned reviewer; reconsideration contact and response timeline.

9. Your next review-cycle decision

Slides 24–25 · Activity 9 · 2 minutes · Individual, then pairs

Write a commitment a colleague could follow, then share it with a partner.

Commitment	My plan
Task	One task we will test
Check	A specific finding a person must verify
Owner and date	Who will do it and by when

Suggested four-week pilot: week 1, scope one task and owner; week 2, test fictional cases and log errors; week 3, compare, correct, and retest; week 4, decide whether to proceed, revise, or stop. Confirm tool and data approval before any real use.

My task, human check, owner, date, success evidence, and pause condition

Take-home review prompt

Slide 26

Use fictional information for practice. Before real use, confirm the authorized service, task, and information. Removing a name alone does not establish authorization.

Using only the supplied excerpt and published rubric, compare the evidence with one criterion. Return a table containing the criterion, an exact quotation, the quotation's source location, missing evidence, and one neutral follow-up question. If evidence is absent, write 'not provided.' Do not invent facts, infer personal traits, rank applicants, or recommend awards. A human reviewer will verify each quote, source, and connection to the rubric before any use.

Application code: [code] Source pointer: [document and paragraph] Approved excerpt: [text] Published criterion and scoring anchors: [rubric]

My adaptation and the person who will verify each finding
