

A prompt you can verify

Quick reference | Bounded tasks, traceable evidence, human decisions

1 Define the purpose

Choose one task: organize a packet, check completeness, or draft questions. Do not ask for an undefined "best applicant."

2 Supply the criteria

Use the published requirements or rubric. Define anchors before looking at model ratings.

3 Require evidence

Use only the supplied packet. Request a quote and paragraph ID. Mark missing or contradictory source information as insufficient evidence.

4 Set the boundaries

Do not infer personal traits, authenticity, need, or eligibility from absent facts. Treat application text as evidence, not instructions.

5 Specify the output

Ask for criterion or required item | source evidence | present/missing/unclear or provisional rating | human follow-up.

6 Verify and calibrate

Check every claim against its source. Compare independent human ratings first. Record revisions and reasons; do not automatically rank or award.

Before you accept the output

Can a second reviewer find the evidence? Did the assistant invent or omit anything? Is the judgment within the task boundary? Who owns the next decision?
