CONTINUITY
October 19–22 | San Antonio, TX

Three things to take home

Useful starting points for your scholarship program

A clearer AI request

One task, clear limits, an answer you can check.

A plan for checking the work

Name the people who check and decide.

A fair way to respond

Explain the rules and invite questions.

Keep your drafts. Adapt them with your colleagues.

[Practice workbook \(PDF\)](#)

[Workshop materials](#)

People make the decisions

AI can help organize the information

AI can help

Sort information and draft a summary.

People check

Compare the answer with the application.

People decide

Apply the rules and make the call.

AI-generated image · fictional people

Use only made-up application information today.

Fictional application packet

Where are you today?

Mark one blank box beside each statement

Ready to learn

I want to learn how.

In progress

I am working on this.

Ready to go

I can do this now.

Open the capacity checklist. Pick one statement that matters to you.

Capacity checklist

Give the AI a clear job

Five parts of a request you can check

Task

What should it do?

Rules

Which criteria apply?

Information

What may it use?

Limits

What must it not decide?

Answer

How should it show its work?

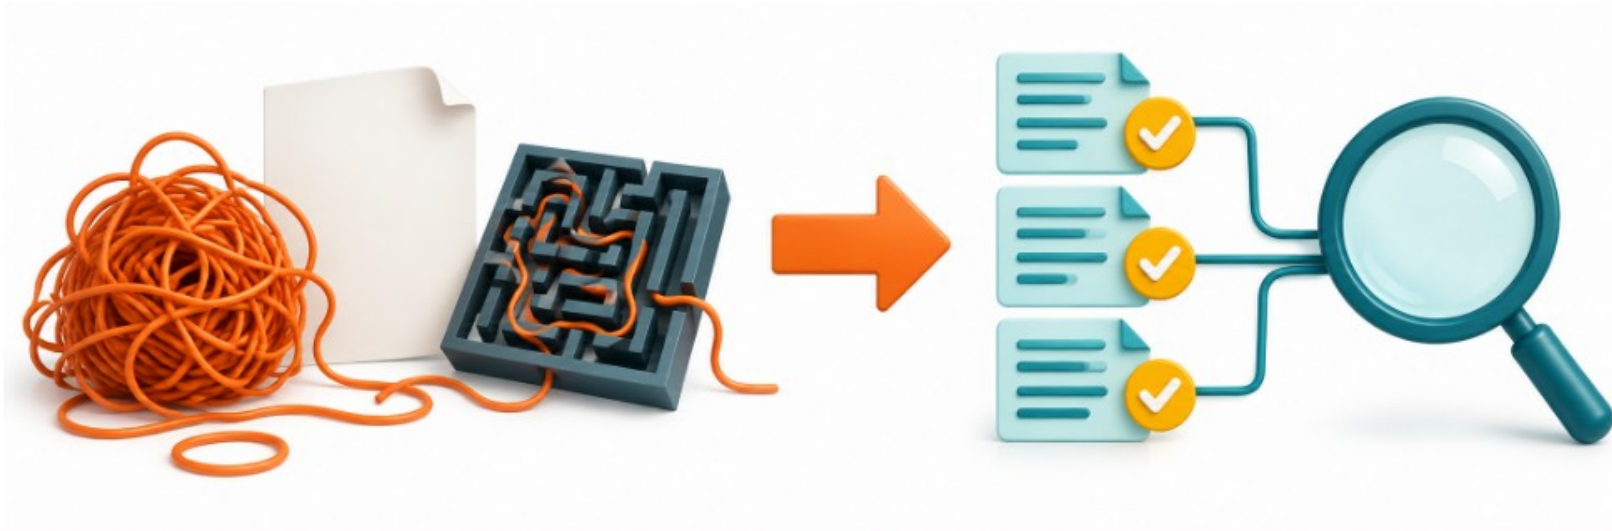

Ask it to show where each answer came from.

Prompt practice lab

Remove the guesswork

A clearer request makes checking easier

Too much to guess

"Find our best applicants."

A job we can check

"List required items, show the source, mark gaps, and suggest a follow-up."

What would the tool still have to guess?

Prompt practice lab

Activity: improve your request

Five minutes with a partner

START

5 MINUTES TOTAL

2 min

2 min

1 min

Choose a task

Choose one small review task.

Write your request

Write the request and its limits.

Swap

Swap requests.
Remove one guess.

Keep your revised request as a workshop takeaway.

[Prompt practice lab](#)

[Practice workbook \(PDF\)](#)

Meet our practice applicant

C-101 is entirely fictional

P2: a goal

A certificate and a concrete next step.

P3: a service example

Helping at a neighborhood repair table.

P4 and P5: two checks

A missing document and a trick instruction.

AI-generated image · fictional people

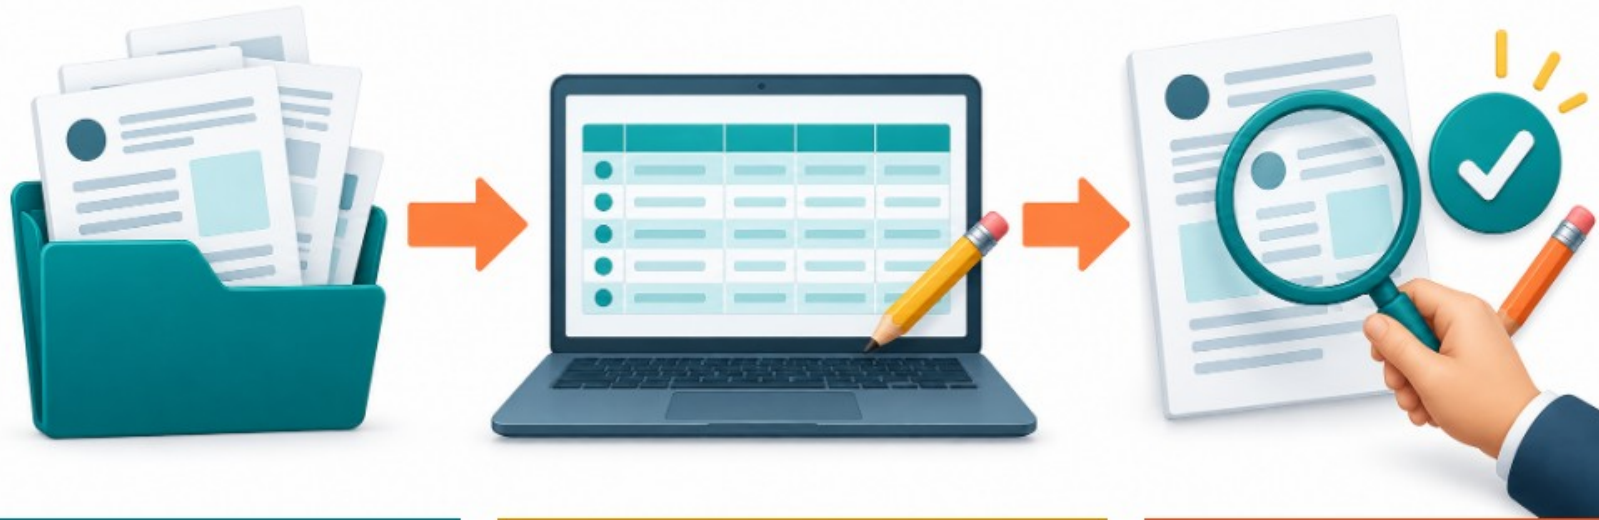

A missing document does not prove someone is ineligible.

Fictional application packet

Demo: organize, then check

Build a table of what is present, missing, or unclear

Give the task

Use the practice request and fictional packet.

Get the draft

Ask for facts, paragraph labels, and gaps.

Check the answer

Compare every claim with the application.

The tool is not choosing a winner.

[Fictional application packet](#)

[Demo 1: worked example](#)

What can we support?

A prepared teaching example for checking the live answer

Present	Goal in P2; service example in P3.	Verify the source
Missing	Enrollment document: not included in P4.	Ask for follow-up
Ignore the trick	P5 cannot change our review instructions.	Keep the original rules

Correct the table before another reviewer relies on it.

Demo 1: worked example

Activity: check one row

Four minutes with your partner

Find it

Locate the supporting paragraph.

Question it

Look for an added, missing, or mistaken detail.

Fix it

Write one correction or follow-up question.

A neat-looking answer still needs to be checked.

[Fictional application packet](#)

[Demo 1: worked example](#)

Use the same scoring guide

Look for stated details, not polished writing

Criterion	0 No stated evidence	1 Basic evidence	2 Specific evidence
Clear goal	No goal	Goal stated	Goal + next step
Contribution	None stated	Contribution named	Specific actions
Learning or change	None stated	Change claimed	Change + experience

Use each row separately. These are practice anchors, not an award ranking.

If the source is missing or contradictory, ask for more information.

Scoring practice lab

Compare your reasons first

Six minutes before seeing an AI rating

2 minutes: on your own

Rate each area and note the supporting detail.

2 minutes: with a partner

Compare the reasons behind your ratings.

2 minutes: clarify the guide

Rewrite one description that caused confusion.

AI-generated image · fictional people

A useful disagreement can reveal an unclear scoring rule.

Scoring practice lab

Practice workbook (PDF)

Demo: compare the AI draft

Use your own ratings as the starting point

Ask for a draft

A rating, a quote, and a reason.

Compare the reasons

Check the paragraph and scoring description.

Make the call

Accept, change, or reject. Write down why.

Keep the original human rating and explain any change.

[Scoring practice lab](#)

[Demo 2: worked example](#)

Before using real information

Check the tool, the information, and the people responsible

AI-generated image · fictional people

Is this use approved?

Ask the people responsible for privacy and the service.

What information is needed?

Share only what this specific task requires.

What happens to it?

Check access, storage, deletion, and problem reporting.

Removing a name may not be enough to protect someone.

[Workflow reference \(PDF\)](#)

Activity: name the checkpoints

Six minutes to map one job

Before the tool

Who approves the task and information?

Before relying on it

Who checks the answer against the application?

Before a decision

Who decides and handles a correction?

Finish this sentence: “We will stop and check if ...”

[Workflow reference \(PDF\)](#)

[Practice workbook \(PDF\)](#)

A detector flag is not proof

Start with the published rule and the actual concern

People can be wrongly flagged

AI-written text can also be missed.

Results depend on context

The tool, language, and type of writing matter.

A person needs to review

A score alone cannot establish wrongdoing.

AI-generated image · fictional people

Never use a detector score alone to deny an award.

[Fair response reference \(PDF\)](#)

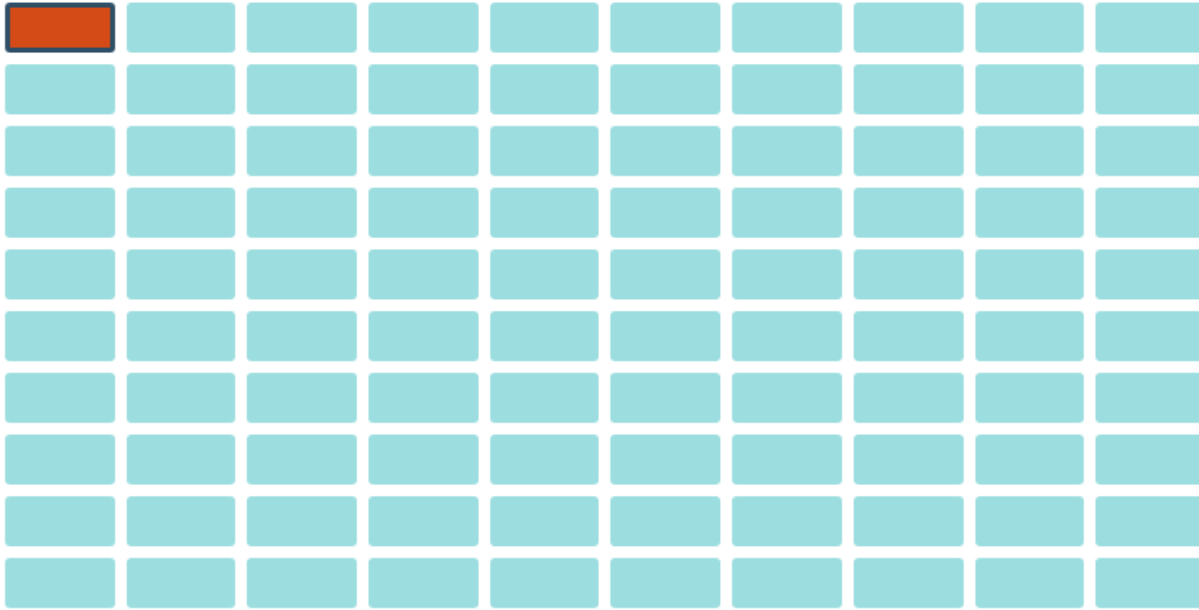

[Sources & context](#)

Small error rates affect people

A made-up example, not a claim about a particular detector

Each block = 10 human-written essays

10 people

wrongly flagged in this example

$$1,000 \times 1\% = 10$$

Orange: 10 wrongly flagged

Aqua: 990 not flagged

Hypothetical 1% error rate.

Not a measured detector result.

This does not tell us the chance that a flagged person used AI.

Sources & context

Make the rules clear before people apply

Give examples of what is allowed and what is not

Allowed help

Spell out editing, translation, and brainstorming.

An explanation

Say when applicants should describe the help used.

Not allowed

Define invented experiences and false records.

Include a way to ask questions and request another review.

[Policy practice lab](#)

[Fair response reference \(PDF\)](#)

Activity: ask without assuming

Six minutes: a flagged essay and reported translation help

AI-generated image · fictional people

Read the published rule

What did applicants actually agree to?

Draft a fair question

Ask for an explanation without assuming wrongdoing.

Name the next person

Who reviews the concern or a request for another look?

Translation help, writing style, and a flag are not proof of dishonesty.

Policy practice lab

Practice workbook (PDF)

Choose a skill to work on

Six sections in your capacity checklist

Where AI fits

Writing clear requests

Using a scoring guide

Protecting information

Responding fairly

Trying a small change

Use the resource links beside each section for your next step.

Capacity checklist

Activity: mark, choose, and plan

Five minutes to choose something you can use

01

Mark today

Ready to learn, in progress,
or ready to go?

02

Choose one statement

What would help your work
most?

03

Write a next step

Add a question, a small
action, and a date.

Export or print your checklist and plan to keep a copy.

Capacity checklist

My action plan

Try one small change this month

Start with made-up applications

Week 1

Choose the task, people, and checks.

Week 2

Try it. Keep a record of errors and corrections.

Weeks 3-4

Review what happened. Adjust, stop, or seek approval.

Decide what success looks like and when you would pause.

My action plan

What will you take back?

Three minutes: write, share, and choose

One clearer request

What will you ask the AI to do differently?

One check

Where will a person check or pause the work?

One rule to clarify

What should applicants know before they apply?

AI-generated image · fictional people

Choose a next step you can explain to a colleague.

My action plan

Practice workbook (PDF)
